The treatment of cancer, one of the major challenges in medicine today, relies heavily on the employment of medical and surgical therapies. Although chemotherapy can effectively eliminate tumor cells, its antitumor effects also lead to considerable collateral damage to healthy tissue, particularly the lungs. Lung has a very effective immune system, and it is evident that clinical immune therapy to a systemic extent would be detrimental. Consequently, lung-directed cancer therapy has received little attention. The past years have witnessed the development of pulmonary delivery systems that have enabled the safe and effective delivery of vaccines and chemotherapeutics to the lung. This review seeks to identify the potential antitumor immunity in the lung and also discusses current efforts to modulate this immunity to improve therapeutic approaches against cancer. In addition, we also discuss the potential of intranasal vaccination against lung cancers, with an emphasis on polymeric nanoparticles as carriers. 1, 'u15' => 0x0000, // Return U+15 in UTF-16 (UTF-16BE, Big-Endian) 'u16' => 0x0001, // Return U+16 in UTF-16 (UTF-16LE, Little-Endian) 'u32' => 0x0002, // Return U+32 in UTF-32 (UTF
