That's one of the user-centered ideas behind Scribd, a new technology platform for sharing documents in all their text-rich glory. The idea is simple and audacious: let users make their own documents on the Web, and let them be viewed on any device in any format. You could think of the platform as a social network or a blogging engine for documents. But Scribd's approach is totally different; it doesn't try to draw people in with content and features, but simply opens up a new way to connect. Scribd, launched earlier this year and available at www.scribd.com, is simply one of many new online document-sharing services being introduced in the Web 2.0 era. Others include Google Docs, DokuWiki, Webmention and Upcoming. Scribd can be thought of as an open platform for sharing documents online, much like what blogging was to the Web a few years ago.

What's New In?

All you have to do is install Ixsaan Sound Recorder on your computer and try it. It is a simple application for playing wav files. It has a small and graphical interface with a few tools. You can't customize the interface and it can only play one audio file at a time. You can pause, stop, play, fast forward and reverse. You can increase or decrease volume, however, there is no special bar for that. You will find all the tools you might need to play wav files in the menu bar. It has a few attributes and a wide selection of options. In fact, you will find the most essential options already, but there are still many options. There is an option to convert your wav file into gsm, nct, wma or m4a. It only supports wav files, which is kind of disappointing. It supports multiple audio clips, however. You could even use several files simultaneously. The quality is decent, though. There is a special feature, which lets you choose an echo effect to your audio file, but that feature is limited.
