## **Shoot Your Friends Game Introduction**

Once upon a time, there were two fellows, Tom & Nick, and they were both soooooo happy because they were finally playing videogames.

One day, Tom got this new game and was impishly excited about it. He decided to practice and play and play until one day, he was the very best!

Nick was inspired as Tom was gaming so he too decided to play too. For days, they battled each other to the death! They were so close... they almost made a fist shake.

One day, out of the blue, Tom collapsed from stress. They both needed a break from each other; they

---

needed time to breathe and worry about something, anything else. They needed to face their problems and work on those again so they took some time out from fighting. They both needed some space... to chill.

After the stress and anxiety is gone, they were both kinda like "ahhh, that was so much fun!" but after a bit of "what's next", they both came up with this awesome idea. Two ideas actually.

One being, that... Tom was so good, he could have more players than just Nick. So Nick came up with the idea for a fun party game, to play with everyone, and break the monotony of it all. They both thought this could definitely bring a good change into their lives.

But sadly, it turned out to be... a complete failure because they didn't have any good connections, or friends to invite to play

## What's new:

Today, UNBSL was pleased to bring them a preview of the newest version of its patented 3-Dimensional (3D) product called, "Dexterity Ball 3D™ ." Unlike the old plastic balls, these are "practically" indestructible. It's something that the owner goes through some angst to get. The obvious objection, is that it's the same product as the old plastic balls. So why would anyone want to upgrade from the old plastic balls? There are several factors. First, its great feel. The 3D is softer. The old plastic balls were too hard in the feel and couldn't be rolled around. Second, the 3D comes in a variety of sizes. Since the 3D is soft, they can be different sizes — smaller — than the plastic balls. That means you can also exercise with different difficulties, in more sections of your hip this time. Third, the 3D is more resilient and less susceptible to wear and tear. The old plastic balls lost their "feel" over time. The 3D won't. Hence, it's better suited for exercise This is what is so exciting about technology. We're always on the cutting edge. I hope you can see how you might be able to go through your day more easily. I brought my Blueprint files into the office and put together our 5 PowerPoint, 3 web site and 3 set of brochures with the new look. There were also a few different types of the new color and a new shape and size of the Old English script lettering. I'm a visual person. So, my job is really just to balance out the functionality of the design with an easy to use, and clear, lay out that is visually appealing while still satisfying the intended use of the product. Ah, the mechanical watch! Since them days, I wear a watch. I love a good mechanical watch. Especially, if it's one of the ones with a bezel. That means that the second hand moves around the face. These are especially good for tracking changes in time. For example, you can set the watch to track the position of the sun or moon, the passing of a fixed object, like a flag or the outer edge of the horizon. These really are good tools for track use to help you manage your time and focus on where you are on some fixed, objective, time line at any moment or place in time.
