What it Does: The Gradient Editor helps you create many kinds of linear or blended gradients from one color to another. You can use the Gradient tool to paint along a path to make a gradient that's automatically applied to your spot or object. And like the Clone Stamp tool, you can use the Gradient tool to duplicate and vary a pattern over your image, like someone's hair or clothing—or even the hair and clothing of a person in the photo. The Hand tool lets you use your fingers to select an area—or keep a brush in place—and paint with an intensity that's much like using a crayon or a marker. Once you've selected your area, use the effects of the Color Sampler to pick a new color and paint the color right to the edge of your area. Photoshop's Smart Brush features the new features that give you full control over your exposure (fine-tuning) and that give you curves and levels adjustments. The option to change the size of the brush to create differing amounts of detail is also another excellent tool. Another new feature is the ability to use multiple Smart Brushes on the same image. The Elusive Edge tool makes it easy to add a softer, blurred look to your images with curves adjustments. This tool allows you to not only blur borders and shapes, but also to blur the features within them allowing you to achieve a soft, blurred look with the photo. I am not a professional.
