I was hoping MobileMe would provide a web interface for Flickr and Evernote, but that didn't happen. On the other hand, the cleaner interface of the MobileMe interface, which won me over entirely, meant that I can focus on the photo itself, rather than getting a seemingly endless list of "artistic" choices in colour, contrast and saturation. I thought — at the time I first wrote this — that this was a fitting tribute to the death of the map tie-in. The reality is that maps are now content, not even "content". As the guide to Twitter on Windows said: "Maps are what they are – stand alone things".
