Open the software, and select the file you want to convert. Then, go to File > Save as…. When prompted, select the appropriate option to convert a file to the desired file format.

Photoshop offers incredible image editing tools and an intuitive user interface, but designers need to manage projects for their business. With the new new Adobe Creative Cloud App for Mac, designers can search and manage assets directly from within the app, and use automatic triggers to build workflows in the cloud and maintain cross-project consistency. New Features in Elements – Adobe's flagship editing app, Adobe Photoshop Elements, now includes more features for designers. These include new presets for screen and print-making purposes, the ability to apply different treatments to different areas of an image, and multiple image filters that can be applied when printing a photo. Additionally new Design Workflow features in Elements now have a unified workflow with Photoshop desktop, making it easier than ever to create, edit and export projects in either environment. POWER OF AI – Adobe's breakthrough machine learning delivers unprecedented results across the entire desktop app. Adobe AI is the indirect and unspoken genius of the platform, teaching Photoshop how to transform the way you work. The results are amazing and unexpected: smarter, faster, more accurate. AI is already driving Photoshop innovation in every creative software product in the business, powering new features and capabilities in the tools and apps you use every day. Now it becomes a common trend within the web designing community to use basic JavaScript and jQuery plugins as a building block for the web sites. Most of them are free and commonly known as the widget plugins. But some are paid and highly recommended for using on a website. Some of the websites that I would recommend are the following:

- WooCommerce: This is also one of the most widely used plugin. This is a free commerce plugin. It allows you to sell your products online. Most of the businesses use WooCommerce to save money. It also helps to avoid any extra work in order to integrate the cart functionality on your website.
- jQuery Custom Text: It is a tiny library that helps you to add custom text anywhere on your

website. It is a free plugin.

- Free WordPress Plugin: It is a free plugin available with a small functionality to customize your website.
