One of the greatest advancements in Lightroom is the new ability to share and edit your image files and metadata in Lightroom as well as in Photoshop directly, right from a compatible device. While the self-service feature of the older versions was wonderful, new users may take a bit to get acclimated to this new approach to syncing. However, this process is as simple as pie. First, you and your images

were pulled into the Lightroom app and then dragged down to the new, preferred location. Next, you right-clicked, chose Export to iCloud, then selected your preferred location and either shared or sent the photo. Finally, you resized the images, uploaded a catalog, and then exported images to your external drive, ready for editing in Photoshop. Or, your images were saved to your desktop, ready for editing in Photoshop CS6. Most Photoshop file types (PSD, AI, EPS, and so on) are **open, editable, and shareable** at 50% compression, so what you see on screen is almost exactly what you can export. To upload to Google+, Flickr, or Twitter, you go to the Dropbox folder and let it automatically upload. You can then edit files from that folder in Photoshop CS or even back up folders. There also to upload and organize from Lightroom. The short version? Lightroom for Windows is an instant-impact upgrade on the built-in Photoshop Express app. It's simpler, manual, and much nicer to look at. It also takes raw files directly from your camera, not your PC.

Lightroom is a professional photography workflow app that helps you manage and organize all aspects of your digital photography workflow — from the initial capture to the finished file. It is the only professional photography workflow app that includes powerful editing and organizing tools — and it does so in a single, simple app for Mac and Windows and mobile apps for iPhone and iPad. It offers a significant improvement in the way you work, bringing together the creation of and organization of all of your best photos in one workflow. It makes it easy to manage and edit photos on your desktop, mobile phones, and tablets — any time, anywhere. Today we are announcing the new digital photography workflow app: Lightroom CC, available later this fall on both Apple and Android. As our fifth wave

of innovation with Lightroom, we're bringing together powerful editing and organizing tools in a single app with a powerful camera manual. Today, smartphones are the easiest way you have ever taken a photo to share with the world. With iPad Pro and iPhone Pro, ordinary people and first-time photographers alike can make stunning images that express their creativity. After all, they still have a camera on their iPhone — kids can run out and take their first-ever photos of a baby as easily as they can share those photos on the big screen using iPad Pro. For many casual photographers and editors, the only true Photoshop they have is in their own phone. But the reality is, the only way to handle the larger and more complex scenes we shoot with our smartphones is when they're put on a large screen. e3d0a04c9c
